

## Consistent Report Writing for Teams

A real world example from a clinical setting

### The Challenge

Dr. Gretta’s neuropsychology practice relies on psychometricians, interns, and neuropsychologists to produce each report. As volume increased, tedious data entry, inconsistent language, and repeated feedback cycles slowed report completion. The result was a workflow where clinicians spent too much time correcting drafts instead of focusing on clinical judgment and patient care.

*“I don’t want my team to have to work overtime to get paperwork done.”*

**25+**

minutes spent describing each test

**180+**

minutes spent on the Background Information

**15+**

hours spent per report

### Report Production Becomes a Team Bottleneck

- Test results need to be manually identified, entered, and described in reports.
- Each report draft must be checked for accuracy, consistency, pronoun usage, formatting, and outdated information.
- Each licensed neuropsychologist writes in a slightly different style, making final reports harder to standardize.

*“Sometimes getting started is the hardest part for the team. We run into writer’s block when we’re trying to bring every required element together.”*

## The Solution

Dr. Gretta introduced ParchmentAI to streamline report writing across the full team workflow. Psychometricians use it to summarize test information faster and with fewer manual-entry errors. Interns use it to generate first drafts of narrative report sections, then prepare cleaner drafts for review by a licensed neuropsychologist. Because reports start closer to the practice's preferred structure, language, and format, fewer errors make it to the review stage and fewer iterations are required.

*“My supervisees save time writing, I save time reviewing. It's been a win-win!”*

**64%**

time **saved** per test  
described

**81%**

time **saved** per  
Background Information

**9+**

hours **saved**  
per report

### No Technical Setup Required

- Guided consultation and walkthrough included
- White-glove configuration available
- Iterative AI training based on professional feedback

### Report Structure and Voice Are Preserved

- Strict adherence to provided report templates
- Automatic handling of names, pronouns, and referential language
- Flexible input from intake forms, notes, audio, PDFs, or CSVs

### Report Generation at Scale

- Teams share preferences, settings, and configurations
- HIPAA Compliant workflow stores no copy of client data
- No report throttling or per-report charging for licensed users
