

## Structured Report Writing at Scale

A real world example from a clinical setting

### The Challenge

Dr. J collects an intake form completed by the patient in advance, along with notes from a clinical interview, and uses these materials to populate a highly structured report template. Each report must be personalized, clinically precise, and consistent in format. As case volume increases report writing quickly becomes overwhelming.

*“I’m so behind.  
I worked on reports all weekend.”*

**80+**

reports per month

**40**

minutes per report

**53+**

hours per month

### Report Writing Becomes the Bottleneck

- Relevant information must be identified and integrated from documentation.
- Correct pronoun & name usage must be updated consistently throughout the report.
- Narrative flow must incorporate changes naturally while adhering to a fixed voice, format, and structure.

*“It will be a game changer if this can be done with the press of a single button... it will make my life so much easier.”*

## The Solution

Dr. J uses ParchmentAI to configure custom AI that learns his writing style and reduces the manual effort required to assemble reports. With as few as five representative samples the ParchmentAI team was able to align the AI to Dr. J's established format and narrative voice, enabling consistent report generation in a fraction of the time. Now writing a report is as simple as uploading the intake form along with any notes and hitting "generate".

*"Thank you—you've saved my life here."*

**85%**

time **saved**  
per report

**34**

minutes **saved**  
per report

**45+**

hours **saved**  
per month

### No Technical Setup Required

- Guided consultation and walkthrough included
- White-glove configuration optional
- Iterative AI training based on professional feedback

### Report Structure and Voice Are Preserved

- Strict adherence to provided report templates
- Automatic handling of names, pronouns, and referential language
- Flexible input from intake forms, notes, audio, PDFs, or CSVs

### Report Generation at Scale

- Supports generation of individual sections or complete reports
- No report throttling or per-report charging for licensed users
- HIPAA Compliant workflow stores no copy of client data
