

Single Practitioner Report Writing

A real world example from a clinical setting

The Challenge

Dr. Chris maintains a growing wait list of clients while balancing therapy sessions, report writing, and the administrative demands of running a solo practice. As the wait list grows, report turnaround becomes a limiting factor: the longer reports take, the slower he can move clients through the process and make room for the next person waiting.

“The only way my practice is going to grow is if I can find ways to improve my efficiency”

30

minutes spent describing each test

80

minutes spent on the Background Information

5

hours spent per report

Report Writing Becomes the Bottleneck

- Relevant information must be identified and integrated from documentation.
- Correct pronoun & name usage must be updated consistently throughout the report.
- Narrative flow must incorporate changes naturally while adhering to a fixed voice, format, and structure.

“I write my reports at 5am, otherwise I would never see my kids.”

The Solution

Dr. Chris imported his personal report template into ParchmentAI, allowing the AI to learn his preferred report structure, wording, and tone. He now uses ParchmentAI to describe test information, draft Background Information, and assemble report sections in a format that matches how he already writes. Instead of starting from a blank page, Dr. Chris begins with a structured draft that preserves his clinical voice and reduces the manual effort required to complete each report.

“Knowing that reports can be done quicker makes the wait-list feel more manageable.”

No Technical Setup Required

- Guided consultation and walkthrough included
- White-glove configuration optional
- Iterative AI training based on professional feedback

Report Structure and Voice Are Preserved

- Strict adherence to provided report templates
- Automatic handling of names, pronouns, and referential language
- Flexible input from intake forms, notes, audio, PDFs, or CSVs

Report Generation at Scale

- Generate only the parts of the report you need
- No report throttling or per-report charging for licensed users
- HIPAA Compliant workflow stores no copy of client data
